# V10.1.1

*August 30, 2024*

The DataRobot v10.1.1 release includes some fixed issues in the DataRobot Self-Managed AI Platform. See the v10.1.0 release notes for:

- [Features introduced in v10.1.0](#)

## Issues fixed in V10.1.1

The following issues have been fixed since release v10.1.0:

### Trust and explainability

- TREX-5036: Fixes an issue where Feature Effects could fail suddenly due to an unstable internal API call.

### Data management

- DM-14203: Fixes an issue that prevented the sharing modal from displaying more than 10 users, organizations, or groups.

### Model management

- MMM-17257: Fixes an issue where the scheduled deployment report email notification was not sent.

### No-Code AI Apps

appeared after making predictions.

## Generative AI

- BUZZOK-4752: Fixes an issue that caused LLM prompt failures in GenAI playground environments where the egress network policy forbid HTTPS connections to Azure Blob Storage.
- BUZZOK-4207: Fixes an issue where an empty value for session token for AWS credentials would lead to an error for the runtime parameters.

## Predictions

- PRED-10261: Fixes an issue that caused "Internal Server Error" in specific scenarios when displaying batch prediction jobs. Invalid user-facing log entries will no longer crash the listing of batch prediction jobs.

## Notebooks

- NB-5431: Fixes an error in notebooks that occurred when using the Pandas DataFrame `head()` method on a DataFrame that had a MultiIndex.

## Platform

- PLT-15056: Fixes an issue where, SAML or LDAP auth is configured, RBAC user roles page returned an error for deployments.
